

# ESPAI SOTA ZERO

Amortization 5.4 years.

Power 125.7 kWp; 100 kW.

Collection area 762 m2.

381 polycrystalline modules 330 Wp .

Production 181.7 MWh / year.

Emission reduction 63,595 kg of CO2/year.

# ESPAI SOTA ZERO

Present the photovoltaic installation for self-consumption of 125.7 kWp of polycrystalline modules of class A, and a nominal power of 100 kW with first-class inverters, which we have installed at Espai Sota Zero, SL, a ice manufacturing company located in the town from Campredó, Tarragona.

The installation has been carried out on the sheet metal cover; It consists of 381 polycrystalline PV modules and will allow an annual production of 181.7 Mwh/year, with significant economic savings, as well as the reduction of atmospheric emissions of 63.5 tons per year of CO<sub>2</sub>.

Satisfied to have collaborated in 2019 with Espai Sota Zero, SL, from the preliminary phases, design, project development, installation, construction management, approval and connection of its self-consumption photovoltaic plant.
